Phase 4, 25 points
Due Monday, April 13th at 9am
By the end of this phase, your “back-end” or database code should be complete. Each group must submit updated documentation of their stored procedures interfaces with notes as to any revisions that have been made, a hard copy of the code for their stored procedures, and a script of the execution of the procedures (including input and output). The “script” can be created by “copy and paste,” as we’ve been doing for labs.

Deliverables for this phase:
- (2 pts) Updated stored procedure interfaces (with notes marking changes, if any)
- (18 pts) Stored procedure code
- (5 pts) Script showing stored procedure execution (input and output)

Phase 5, 30 points
Due April 29th at 8am
We’ll be doing project demos (approximately 10 minutes per group). Besides showing off your project’s functionality, be sure to talk about the development process itself: What were the trouble spots? How did you address them? What worked well and what didn’t? If you were starting from scratch, how would you do things differently (if at all)?

Deliverables for this phase:
- (15 pts) URL to application (or code, if not web-based)
- (10 pts) Final Report, which should:
  - briefly describe what the project accomplished,
  - state if your end product matches the beginning design, and if not, why not
  - tell the story of your project, as in the presentation description above
  - describe the final division of labor (who did what),
  - list any other strengths you would like to bring to my attention while grading your project.
- (5 pts) Presentation
