Navigating to your Linux directory through the Command Line on macOS

The graphical approach:

1. Click on the Finder.app icon in the dock

2. Click on your name on the left side of the Finder window (and patiently wait)

3. Launch Spotlight (Using Command+Space), type in Terminal, and press Enter
4. (Create if needed) a 330 directory

![Image of a Mac file explorer window with a directory named 330 selected.]

5. Type in “cd”, then click-and-drag the 330 directory into the terminal

![Image of a terminal window with the command `cd` entered and the 330 directory拖拽到终端中。]

The text-based approach:

Your Linux home directory is accessible through the following path on macOS:

```
/Volumes/csfiles/students/\${USER}
```
